

Trevor Zellmer  
Intermediate Java  
Week 7 practice problems

I tested the program twice. Both times 150 randomly generated numbers were printed to the terminal output, and 150 numbers were written to the csv file, just as anticipated. The numbers were unique and randomly generated just as the instructions specify.

```
src > java111 > week7 > J LicensePlatesSimulator.java > LicensePlatesSimulator > getRandomPlates(Random, int)
6 public class LicensePlatesSimulator {
58
59 Run | Debug
60 public static void main(String[] args) throws IOException{
61     String path = "src//java111//week7//license_plates.txt";
62     //step-1: create a Random object as a random number generator
63     Random rNumberGenerator = new Random();
64     ArrayList<String> plates = getRandomPlates(rNumberGenerator, numR:100);
65     //this loads all the data from the csv file into the plates array
66     loadData(path);
67     //this adds another 50 plates to the array
68     plates.addAll(getRandomPlates(rNumberGenerator, numR:50));
69     plates.forEach((p) -> System.out.println(p));
70     plates.forEach((p) -> writeCsv(path, p + "\n"));
71     System.out.println("Data is saved to " + (new File(path)).getAbsolutePath() );
72 }
73 /**
74  * getRandomPlates: generate license plate numbers by using random number generator
75  * @param rGenerator
76  * @param numR
77  * @return ArrayList<String>
78  */
79 public static ArrayList<String> getRandomPlates(Random rGenerator, int numR){
80     ArrayList<String> plates = new ArrayList<String>();
81     String p1 = "", p2="";
82     //Step-5: add a for loop to generate part-1 and part-2 of the license plates
83     //call getRandom() method to get part-1 and part-2 string
84 }
